## Abstracts

Glove box and vacuum coating machine is an integration of the vacuum coating system and the glove box system. The thin film evaporation is completed in the high vacuum evaporation chamber, and the sample preservation, preparation, and post-evaporation testing are completed in the high-purity inert gas atmosphere in the glove box. This makes the entire thin film growth and device preparation process highly integrated in a complete and controllable system, eliminating the influence of unstable factors in the atmospheric environment during the preparation of large-area organic circuits, and ensuring the preparation of high-performance, large-area organic optoelectronic devices and circuits.

The global Glove Box And Vacuum Coating Machines market size was estimated at USD 850.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.35% during the forecast period.
