Report Overview

A GPS Disciplined Oven-Controlled Crystal Oscillator (OCXO) is a high-precision frequency control device that utilizes Global Positioning System (GPS) signals to maintain and discipline its output frequency. This sophisticated technology combines the stability and low drift characteristics of an OCXO with the accuracy and reliability of GPS signals. The OCXO, known for its excellent short-term stability and temperature compensation, is disciplined by the GPS receiver, which continuously compares the OCXO's frequency to the highly accurate time signals provided by GPS satellites. Any frequency discrepancies are corrected in real-time, ensuring the OCXO's output remains highly accurate and stable over time. This type of oscillator is particularly useful in applications requiring precise timekeeping and synchronization, such as telecommunications, scientific research, and navigation systems.
