Report Overview

Granular dry ice blasting machines are specialized industrial cleaning systems that use compressed air to propel dry ice pellets (CO₂ in solid form) at high velocities to remove contaminants, coatings, or residues from surfaces without causing damage or generating secondary waste. Unlike traditional blasting methods that rely on abrasive media, dry ice sublimates upon impact, leaving no residue and eliminating the need for post-cleaning disposal. These machines are widely used in industries such as automotive, aerospace, food processing, and manufacturing for applications like mold cleaning, paint removal, and equipment maintenance. The technology offers advantages such as non-abrasiveness, non-conductivity, and environmental friendliness, making it a preferred choice for businesses aiming to reduce chemical use and comply with stringent environmental regulations. The market demand is driven by increasing industrial automation, stringent cleanliness standards, and the growing emphasis on sustainable cleaning solutions.
