Abstracts

MWCNTs are mainly produced using the C-CVD process (catalytic chemical vapor deposition). The evolution of accumulated global production for MWCNTs is shown below. Note here that the commercialization efforts start around 2005/2006. The super hype then sets in, leading to a rush to install capacity. This pushes the industry into a state of overcapacity, and still worse, pushes many to produce a CNT that is not good enough to meaningfully displace carbon black or similar.

The global Graphene 2D Materials And Carbon Nanotubes market size was estimated at USD 275.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.85% during the forecast period.
