Report Overview

Gravity Purifiers are water filtration systems that utilize the force of gravity to filter and purify water. These systems typically consist of a container or vessel with a filter element at the bottom, allowing water to flow through the filter by gravity, rather than requiring an external power source. The filtration process involves passing water through various layers of filters, such as activated carbon, ceramic, or other materials, to remove impurities, contaminants, and harmful substances. Gravity Purifiers are designed to provide clean, safe drinking water in situations where electricity is not available or where a portable water purification solution is needed. They are often used in outdoor activities, emergency preparedness, or in developing countries where access to clean water is limited.
