Abstracts

Green Silicon Carbide Micro Powder is a silicon carbide product with high thermal conductivity and high strength at high temperatures. It is usually produced by heating silica sand and a carbon source (usually petroleum coke) to high temperatures. The result of this high-temperature process is the crystalline form of silicon carbide particles, which appear in green and black colors. The color difference is due to the purity of the silicon carbide. The purity of green silicon carbide is higher than that of black silicon carbide.

The global Green Silicon Carbide Micro Powder market size was estimated at USD 480.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
