Report Overview

Grid-connected photovoltaic power generation refers to a system that harnesses solar energy by converting sunlight into electricity using photovoltaic (PV) modules. These modules are composed of semiconductor materials, typically silicon, which generate direct current (DC) electricity when exposed to sunlight. The generated DC power is then transformed into alternating current (AC) through an inverter, which is compatible with the electrical grid. This system allows for the integration of renewable energy into the existing power infrastructure, enabling the distribution and consumption of clean, sustainable electricity. Grid-connected photovoltaic power generation systems can be installed on rooftops, open fields, or other suitable locations, and they play a crucial role in reducing greenhouse gas emissions and promoting energy independence.
