Abstracts

Grid simulation power supply is a kind of test equipment that can accurately simulate the characteristics of public power grid. It is mainly used to simulate various electrical parameters and conditions of power grid, including but not limited to voltage, frequency, phase angle and harmonic content. In this way, the grid-analog power supply provides a controlled and repeatable test environment for devices under test, such as inverters, uninterruptible power supplies (UPS), energy storage systems, and other devices that interact with the grid.

Market Concentration and Key Players: Internationally, the power grid analog power supply market concentration is relatively high, there are AMETEK Eaton and Keysight Technologies and other large enterprises to produce the product, but also REGATRON production; domestically, its market concentration is not high, some domestic power leading enterprises have production, such as Cowell Technology, Sunshine Power Technology, Hopewell Electric, etc., there are also Taiwan enterprises Epps power production.

Manufacturing Processes and Market Trends: The manufacturing process of grid analog power supply involves high-precision power electronics technology, which realizes high-efficiency conversion and precise control through the use of advanced IGBT (insulated gate bipolar transistor) or MOSFET (metal oxide semiconductor field effect transistor). It is designed for stability, reliability and response speed to simulate a variety of grid conditions. In terms of market trends, with the integration of renewable energy, the expansion of electric vehicle charging infrastructure and the development of smart grid technology, the demand for grid analog power is increasing. These devices help ensure that new equipment and technologies operate reliably under different grid conditions, supporting the global transition to a greener, more sustainable energy mix. At the same time, user demand for efficient, versatile test solutions drives product innovation and development.

The global Grid Simulation Power Supply market size was estimated at USD 789.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
