Report Overview

Ground Glass Pozzolan is a construction material derived from the controlled grinding of waste glass, specifically designed for use as a supplementary cementitious material in concrete and mortar mixtures. It is characterized by its fine, powdery texture, which resembles ground glass. This pozzolan enhances the strength and durability of concrete by reacting with calcium hydroxide released during the hydration of cement, forming additional cementitious compounds. The use of Ground Glass Pozzolan not only contributes to sustainable construction practices by recycling waste glass but also improves the workability and reduces the permeability of the final concrete product. It is particularly beneficial in applications requiring high strength, low permeability, and resistance to chemical attack, such as in marine structures, bridges, and other infrastructure projects.
