Abstracts

The ground source heat pump air conditioner adopts an energy-saving and environmentally friendly ground source heat pump system. Its cold and heat source adopts a flexible installation and easy-to-control buried pipe type soil source heat pump system, also known as a soil coupled heat pump system. Specifically, the vertical buried pipe method is adopted, and water is used as the cold and heat carrier. The water circulates between the heat pump unit in the heat exchange pipe buried in the soil, and realizes the heat exchange between the unit and the soil.
