Report Overview

Group II base oil is a refined mineral oil produced through hydrocracking and hydroprocessing, offering superior performance compared to Group I oils due to its higher viscosity index, lower sulfur content, and improved oxidation stability. It is widely used in lubricant formulations for automotive and industrial applications, including engine oils, hydraulic fluids, and gear oils, where enhanced thermal stability and longer service life are required. The market for Group II base oil is driven by stringent environmental regulations pushing for cleaner lubricants, growing demand for high-performance automotive lubricants, and the expansion of industrial activities in emerging economies.
