Report Overview

A Guide Extension Catheter is a medical device used in interventional radiology and cardiology procedures. It is a long, flexible, and hollow tube designed to extend the reach of a guide catheter, allowing for easier access to remote or hard-to-reach blood vessels. The catheter is typically made of a durable, radiopaque material such as polyurethane or nylon, which enables it to be visualized under fluoroscopy. It features a smooth, tapered tip for atraumatic insertion and a hemostatic valve at the proximal end for secure connection to the guide catheter. The Guide Extension Catheter is used to facilitate the delivery of diagnostic and therapeutic devices, such as stents, balloons, and other interventional tools, to the target site within the cardiovascular system.
