Abstracts

Halogen-free lead-free solder paste is a specialized material used in the electronics manufacturing industry for soldering electronic components onto printed circuit boards (PCBs) without the inclusion of halogens or lead. This type of solder paste is composed of a lead-free metal alloy, typically consisting of tin, silver, and copper (SAC alloys), combined with a flux that is free from halogen-based activators. The absence of halogens, such as chlorine and bromine, makes this solder paste more environmentally friendly and reduces the risk of corrosive residues, which can negatively impact the long-term reliability of electronic assemblies. Halogen-free lead-free solder paste is designed to meet stringent environmental regulations, such as the Restriction of Hazardous Substances (RoHS) directive, and is essential for producing high-reliability, eco-friendly electronic devices. Its formulation ensures excellent solderability, mechanical strength, and thermal performance, making it suitable for a wide range of applications, including consumer electronics, automotive systems, aerospace, and medical devices.

The global Halogen Free Lead Free Solder Paste market size was estimated at USD 380.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
