Report Overview

A Hand-Held Non Contact Tonometer is a medical device designed to measure intraocular pressure (IOP) in the eye without the need for direct contact with the cornea. This device uses air-puff technology to gently puff air onto the eye's surface, which then calculates the pressure based on the force of the air puff and the resistance it encounters. It is particularly useful for patients who are uncomfortable with or unable to undergo traditional contact tonometry, such as those with corneal abnormalities or sensitivity. The Hand-Held Non Contact Tonometer offers a quick, painless, and hygienic method for eye care professionals to assess IOP, which is crucial for diagnosing and managing glaucoma and other eye conditions.
