Report Overview

A handheld pulmonary function tester is a portable medical device that can be used to measure lung capacity and respiratory function by asking patients to perform an insufflation test to assess lung function. During the testing, the patient needs to follow the instructions of the device to take a deep breath and then blow quickly and continuously into the device to measure parameters such as vital capacity and peak expiratory flow rate. By measuring these parameters, medical staff can assess the patient's lung function status, monitor and diagnose respiratory diseases, such as asthma, chronic obstructive pulmonary disease, etc.
