Report Overview

The HBsAg Rapid Test Kit is a diagnostic tool designed to detect the presence of the Hepatitis B Surface Antigen (HBsAg) in human serum, plasma, or whole blood samples. This antigen is a key marker for the presence of Hepatitis B virus (HBV) infection. The test kit operates on a lateral flow immunoassay principle, which is a rapid, qualitative method that provides results within 15-20 minutes. It is commonly used in healthcare settings, clinics, and point-of-care testing for the initial screening of individuals suspected of having HBV infection. The kit is easy to use, requiring minimal equipment, and offers a visual readout, typically in the form of colored lines, to indicate the presence or absence of HBsAg. This product is an essential component in the early detection and management of Hepatitis B, contributing to the prevention of further spread of the virus and the initiation of appropriate treatment protocols.
