Abstracts

Heat-sanitizable reverse osmosis (HSRO) element is a specially designed reverse osmosis membrane, and its working principle is mainly based on its unique thermal disinfection function. When disinfection is required, the system will heat the reverse osmosis membrane to a certain level to kill bacteria and viruses attached to the membrane. This thermal disinfection treatment method is not only environmentally friendly, but also can extend the service life of the reverse osmosis membrane, reduce the frequency of maintenance and replacement, and thus reduce the overall water treatment cost.
