### Report Overview

Heavy Alkylbenzene Sulfonate (HABS) is a type of anionic surfactant that is widely used in the manufacturing of detergents, cleaners, and other industrial applications. It is derived from the sulfonation of heavy alkylbenzene, which is a byproduct of the petroleum refining process. HABS is characterized by its high foaming properties, excellent detergency, and good wetting abilities. The product is typically a pale yellow to amber liquid with a strong, characteristic odor. It is known for its effectiveness in removing grease, oil, and dirt from various surfaces, making it a popular choice for formulating heavy-duty cleaning agents. HABS is also valued for its compatibility with other surfactants and its ability to enhance the cleaning performance of formulations. However, it is important to note that HABS is not biodegradable, which has led to concerns about its environmental impact, and as a result, there has been a shift towards more sustainable alternatives in some applications.
