## Abstracts

Heavy-duty truck platooning systems are advanced technologies that enable a group of trucks to travel closely together in a convoy formation, typically with minimal spacing between vehicles, while maintaining safety and efficiency. In a platooning system, the trucks communicate with each other through wireless communication protocols such as Dedicated Short-Range Communication (DSRC) or Cellular Vehicle-to-Everything (C-V2X). Through this communication, the trucks synchronize their speed, braking, and steering, allowing them to operate as a unified unit. The lead truck, often equipped with advanced sensors and control systems, sets the pace and controls the movements of the entire platoon. The following trucks, known as followers or platoon members, adjust their speed and distance in real-time to maintain a safe and aerodynamically efficient following distance from the lead vehicle. Global Truck Platooning Systems key players include Peloton Technology, Volvo, Scania, Daimler, Navistar, etc. Europe is the largest market, with a share about 50%, followed by North America, with a share about 40 percent. In terms of product, Service is the largest segment, with a share about 70%. And in terms of application, the largest application is Light Trucks, followed by Heavy Trucks.

The global Heavy Duty Truck Platooning Systems market size was estimated at USD 2003.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
