### Report Overview

A Heavy Tooth Drag Harrow is a specialized agricultural implement designed to level and smooth soil, particularly after plowing or disking. It consists of a sturdy frame equipped with a series of heavy-duty, tooth-like protrusions that are dragged across the field to break up clumps and create a uniform surface. These teeth are typically made of durable materials like steel to withstand the wear and tear of soil contact. The design allows for effective soil consolidation, reducing air pockets and ensuring proper seed-to-soil contact, which is crucial for optimal germination and crop growth. The heavy tooth drag harrow is often used in large-scale farming operations where a high level of precision and efficiency is required for soil preparation.
