Report Overview

Heme Iron Polypeptide is a dietary supplement that contains a specific form of iron, known as heme iron, which is derived from animal sources. This product is made up of heme, a complex molecule that includes an iron atom at its center, and polypeptides, which are short chains of amino acids. Heme iron is more easily absorbed by the human body compared to non-heme iron found in plant-based foods, making it a potentially more efficient source of iron for individuals who are deficient or require additional iron intake. Heme Iron Polypeptide supplements are often used to address iron deficiency anemia, support overall health, and enhance athletic performance. The product is designed to provide a concentrated form of bioavailable iron, which can be particularly beneficial for vegetarians, vegans, or those with conditions that affect iron absorption.
