### Report Overview

Heparin Calcium API (Active Pharmaceutical Ingredient) is a naturally occurring anticoagulant derived from animal tissues, primarily porcine intestinal mucosa, and is chemically modified to form the calcium salt of heparin. It is widely used in the production of anticoagulant drugs to prevent and treat thromboembolic disorders, including deep vein thrombosis (DVT) and pulmonary embolism (PE), as well as in dialysis and cardiovascular surgeries. The API functions by enhancing the activity of antithrombin III, inhibiting coagulation factors such as thrombin and Factor Xa, thereby prolonging clotting time. Its calcium salt form offers improved stability and reduced side effects, such as heparin-induced thrombocytopenia (HIT), compared to its sodium counterpart. The global heparin API market is highly regulated due to its biological origin, requiring stringent quality control and compliance with pharmacopoeial standards (USP, EP, JP). Demand is driven by increasing cardiovascular diseases, aging populations, and surgical procedures, while supply chain vulnerabilities, such as reliance on porcine sources and geopolitical factors affecting raw material availability, pose challenges. Key manufacturers focus on process optimization, biosynthetic alternatives, and compliance with regulatory requirements to ensure consistent supply and quality.
