Abstracts

The Herriott multi-channel gas absorption cell is suitable for laser spectroscopy analysis of a variety of gas molecular samples. The unique mirror design allows the laser beam to form multiple reflections in the absorption cell, and the effective optical path can reach tens of meters in a very small space, achieving efficient absorption of photons in a very small volume. Compared with the White cell, the Herriott cell has a more stable structure, better insensitivity to thermal deformation, smaller size, simpler installation, and more convenient operation. The cell is suitable for various application fields such as laboratory trace gas analysis, process gas spectrometers, and environmental pollutant monitoring.

The global Herriott Multi Pass Gas Absorption Cells market size was estimated at USD 45.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
