Abstracts

The high-efficiency film coating machine is a device for coating the surface of Chinese and Western medicine tablet cores with sugar and film. It is a new type of equipment that integrates strong electricity, weak electricity, hydraulic pressure, and pneumatics and transforms the original ordinary sugar coating machine. It is mainly composed of main engine (former sugar coating machine), controllable room temperature hot air system, spray system for automatic liquid supply and air supply, etc. The main motor is adjustable in frequency and speed. It sprays the coating auxiliary materials on the surface of the tablet with a high-atomization spray gun by means of automatic control by electrical appliances. At the same time, the tablet moves in a continuous and complicated trajectory in the coating pot to make the coating liquid uniform. Wrapped on the core of the tablet, there is a controllable room temperature hot air in the pot to dry the tablet at the same time, so that the surface of the tablet quickly forms a firm, dense, complete and smooth surface film. Accessories: governor, spray gun, liquid cup, coating pan, blower.
