Report Overview

A High Flow Pleated Filter Cartridge is a type of filtration device designed to efficiently remove contaminants from liquids, particularly in applications requiring high flow rates. This cartridge is characterized by its pleated structure, which consists of multiple layers of filter media folded into a cylindrical shape, maximizing the surface area for filtration and enhancing the overall dirt-holding capacity. The pleated design allows for a high flow rate while maintaining a low pressure drop, making it suitable for applications such as water treatment, industrial processes, and HVAC systems. The cartridge is typically made from materials like polypropylene, polyester, or other synthetic fibers, which are chosen for their chemical resistance and ability to capture particles ranging from micron to sub-micron sizes. The pleats are sealed at both ends to prevent bypass of unfiltered fluid, ensuring that the liquid passing through the cartridge is clean and free from impurities.
