Abstracts

High-flow tracheostomized connectors are medical devices used in respiratory care for patients with tracheostomies. These connectors are specifically designed to facilitate the delivery of high-flow oxygen or air directly to the tracheostomy site. They are typically attached to the tracheostomy tube and connected to a high-flow oxygen or air delivery system. The primary function of tracheostomy high flow connectors is to ensure efficient and comfortable oxygenation and ventilation for patients with tracheostomies, particularly those who require high levels of oxygen therapy or who have difficulty breathing. These connectors help maintain adequate oxygen levels in the lungs and assist in clearing secretions from the airways. Tracheostomy high flow connectors are available in various designs and configurations to suit different patient needs and clinical requirements. They may feature adjustable flow rates, humidification capabilities, and specialized interfaces to ensure compatibility with different tracheostomy tubes and oxygen delivery systems. Overall, tracheostomy high flow connectors play a crucial role in optimizing respiratory support and improving the quality of life for patients with tracheostomies by providing effective and comfortable oxygenation and ventilation.
