Abstracts

The process of using high-k materials instead of conventional gate oxide layer SiON and metal gates instead of polycrystalline silicon gates is called HKMG process technology. HK stands for High-k and MG stands for Metal Gate, which is also known as metal gate. In the past, the HKMG process was mainly used for logic chips, especially processors such as CPUs and GPUs. In recent years, with the development of market demand, many application scenarios have increasingly high requirements for memory performance, and DRAM process technology has evolved to the range of 20nm. At this point, the contradiction between high performance and low power consumption is gradually emerging, and HKMG is an effective method to solve this contradiction.

The global High K Metal Gate Hkmg Process For Dram market size was estimated at USD 1250.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
