## Abstracts

High performance off axis parabolic mirrors are commonly used optical components, typically composed of aspherical mirrors and supporting structures. Unlike traditional spherical mirrors, the reflection surface of off axis parabolic mirrors is not a rotating paraboloid, but is composed of non spherical surfaces, which can eliminate spherical and aberration, and improve optical performance. Off axis parabolic mirrors have the following characteristics: 1 High resolution: Off axis parabolic mirrors can eliminate spherical and aberration, improving optical resolution. 2. Large field of view: The aspherical surface of an off axis parabolic mirror can expand the field of view and improve imaging quality. 3. High reflectivity: The reflective surface of off axis parabolic mirrors usually uses a high reflectivity coating, which can improve reflection efficiency. 4. Good optical stability: The support structure of off axis parabolic mirrors is usually made of high-strength materials, which can ensure optical stability. Off axis parabolic mirrors are widely used in fields such as astronomical observation, optical measurement, lasers, and semiconductor manufacturing, and are an important optical component.

The global High Performance Off Axis Parabolic Mirrors market size was estimated at USD 120.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
