Abstracts

High-pressure fine atomization nozzle is a device that uses high-pressure technology to spray liquid substances into tiny droplets. Its characteristic is that it can produce water mist with extremely small particle size, which is usually between 5 and 100 microns, or even smaller. Under high pressure, the liquid is quickly sprayed out through the fine nozzle holes to form a uniformly distributed mist. This technology is particularly suitable for occasions that require fine control and efficient use of water resources.

The global High Pressure Fine Atomizing Nozzle market size was estimated at USD 185.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
