### Report Overview

A high-pressure spray fan is a refrigeration system that uses a high-pressure water pump to pressurize water to a pressure of several tens of kilograms and produces micro-mist through a high-pressure nozzle. The droplet diameter of these micro-mist is usually less than 10 microns, so it has a large evaporation surface area. When the micro-mist passes through the airflow blown by a powerful fan, it will greatly increase the wind speed on the liquid surface, accelerate the diffusion of gas molecules, and thus promote the evaporation of water. During the evaporation process, water absorbs heat, thereby reducing the temperature of the surrounding environment. At the same time, the high-pressure spray fan can also increase the relative humidity of the air, reduce dust, and purify the air.
