Report Overview

Barium sulfide (chemical formula: BaS) is the sulfide of barium. It is white equiaxed crystal at room temperature, and it is light gray, yellowish green, light brown or black powder when impure. It is the first phosphor material to be prepared, and its properties and preparation have been widely studied as a result. The orange colored Barium sulfide can be obtained by treating the aqueous or alcoholic solution of Barium hydride sulfide with appropriate amount of sulfur. It hydrolyzes in humid air to release toxic hydrogen sulfide gas, and reacts with water or acid to generate hydrogen sulfide. Other products are Barium hydroxide, Barium hydride sulfide or other barium salts. Hexahydrate (BaS · 6H₂O) can be precipitated from a saturated solution, forming hexagonal flake like crystals. Barium sulfide is toxic and can cause poisoning if ingested. The aqueous solution is alkaline, corrosive and depilatory to skin and hair.
