### Report Overview

Chrysene is a polycyclic aromatic hydrocarbon with the chemical formula  $C_{18}H_{12}$ , consisting of four fused benzene rings. It is a natural component of coal tar and was first isolated and characterized from coal tar. It is also found in creosote at levels of 0.5-6 mg/kg. The English word "chrysene" originates from the Greek χρυσός (chrysos), meaning "gold", due to the golden yellow color of its crystals, which is considered to be the correct color and characteristic of the compound when isolated. However, high-purity chrysene is colorless, and the yellow color is due to its trace orange-yellow isomer tetracene, which is not easy to separate.
