Report Overview

High Purity Vinylene Carbonate (VC) is a chemical compound with the molecular formula $C_4H_6O_3$. It is a colorless, odorless, and crystalline solid that is widely used in various industrial applications. VC is primarily employed as a comonomer in the production of specialty polymers, such as poly(vinylidene fluoride) (PVDF), to enhance the polymer's properties, including its thermal stability, chemical resistance, and mechanical strength. Additionally, it serves as a precursor in the synthesis of other chemicals and materials. High purity VC is crucial for ensuring the quality and performance of the final products, as impurities can negatively impact the polymer's properties and limit its applications. The high purity grade of VC is characterized by a low level of impurities, such as residual monomers, oligomers, and other contaminants, which is essential for applications requiring stringent performance criteria.
