Report Overview

A high sodium street light is a type of street light that uses high-pressure sodium (HPS) lamps as the light source. High sodium street lights emit a warm yellow or amber light and are known for their high efficiency and long lifespan. The distinctive yellowish color of the light is a result of the specific spectral output of the high-pressure sodium lamp. These street lights are commonly used in many cities and roadways as they provide good visibility and are energy-efficient compared to other types of street lighting. However, they may not render colors accurately and can create a monochromatic appearance in the illuminated areas. In recent years, many cities have been transitioning to LED-based street lighting as it offers even greater energy efficiency and improved color rendering capabilities.
