Abstracts

High-speed communication optocoupler is a device that transmits electrical signals through light as a medium. Usually, the emitter (infrared light-emitting diode LED) and the light receiver (photosensitive semiconductor tube, photoresistor) are packaged in the same package. In the high-speed communication optocoupler, since the coupling capacitance between the light-emitting tube and the light receiver is very small (within 2pF), the common-mode input voltage has little influence on the output current through the inter-electrode coupling capacitance, so the common-mode rejection ratio is very high.

The global High Speed Communication Optocoupler market size was estimated at USD 1350.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
