Report Overview

High-Speed Serializer/Deserializer (SerDes) is a technology used in high-speed data communication systems, which converts parallel data into a high-speed serial data stream and vice versa. It is an essential component in modern electronic devices, such as servers, data centers, and high-performance computing systems, where large amounts of data need to be transmitted over long distances. The primary function of SerDes is to serialize (convert parallel data into serial data) and deserialize (convert serial data back into parallel data) at high data rates, typically ranging from several gigabits per second to tens of gigabits per second. This technology enables efficient data transmission over long distances, reduces power consumption, and minimizes the number of interconnects required in complex systems. High-Speed SerDes is crucial for maintaining the performance and reliability of high-speed data communication networks.
