Report Overview

High Surface Hardness PC, also known as Polycarbonate with High Surface Hardness, is a type of thermoplastic polymer material that has been specifically engineered to exhibit superior surface hardness compared to standard polycarbonate materials. This enhanced hardness is achieved through the incorporation of additives or the application of special surface treatments, which result in a more durable and scratch-resistant surface. The product is characterized by its high impact resistance, transparency, and heat resistance, making it suitable for a wide range of applications, such as in the manufacturing of protective eyewear, automotive components, and electronic device casings. The high surface hardness of this polycarbonate variant provides improved resistance to wear and tear, making it an ideal choice for applications where the material is frequently subjected to physical stress or contact with abrasive substances.
