Report Overview

High Temperature Metal Gaskets are engineered sealing solutions designed to withstand extreme thermal conditions and maintain their integrity in high-temperature applications. These gaskets are typically made from materials such as stainless steel, Inconel, or other high-temperature resistant alloys, ensuring they can endure temperatures ranging from 500°F to 2000°F (260°C to 1093°C) or even higher, depending on the specific alloy used. They are often used in industries such as aerospace, chemical processing, power generation, and automotive, where components are subjected to high pressures and temperatures. High Temperature Metal Gaskets provide a reliable seal in flanges, valves, and other connections, preventing leaks and maintaining the efficiency and safety of the system. Their design may include features like a soft metal core for conformability and a hard outer layer for strength and durability, making them suitable for both static and dynamic sealing applications.
