Report Overview

High Tg Epoxy Moulding Compound (EMC) is a specialized thermosetting polymer material designed for encapsulation and protection of semiconductor devices, particularly in high-temperature environments. Characterized by its high glass transition temperature (Tg) typically above 170°C, it ensures stability and reliability in demanding applications such as automotive electronics, power modules, and advanced packaging. The material combines epoxy resins with fillers, hardeners, and additives to enhance thermal resistance, mechanical strength, and moisture protection, making it critical for integrated circuits (ICs), LEDs, and other components exposed to thermal stress. Its formulation balances electrical insulation, flame retardancy, and low thermal expansion, meeting stringent industry standards for performance under extreme conditions. The growing demand for miniaturization and higher power density in electronics further drives innovation in High Tg EMC formulations to address evolving technical requirements.
