Report Overview

High Viscosity Carboxymethylcellulose (CMC) is a water-soluble, high molecular weight polysaccharide derivative of cellulose. It is a white, odorless, and tasteless powder that is widely used in various industries due to its unique properties. CMC is derived from natural cellulose through a chemical reaction with monochloroacetic acid, resulting in the introduction of carboxymethyl groups. This modification enhances its solubility and thickening capabilities in water, making it suitable for applications in food, pharmaceuticals, cosmetics, and oil drilling. High viscosity CMC is characterized by its ability to form highly viscous solutions even at low concentrations, which is crucial for its use as a thickening, stabilizing, and suspending agent. It is also known for its non-toxicity, biodegradability, and compatibility with a wide range of substances, contributing to its broad utility across different sectors.
