Report Overview

High Voltage Composite Insulators are electrical insulating devices primarily used in high voltage transmission and distribution systems. These insulators are designed to withstand and insulate against high voltage electrical stress, ensuring the safe and efficient flow of electricity. They are typically made from a combination of materials, such as silicone rubber, fiberglass, and other polymers, which provide excellent dielectric strength, mechanical strength, and resistance to environmental factors like UV radiation, moisture, and chemical exposure. High Voltage Composite Insulators are engineered to maintain electrical integrity over long periods, reducing the risk of flashovers and ensuring the reliability of power transmission. They are commonly used in overhead power lines, substations, and other high voltage applications where the insulation of electrical conductors from ground potential is critical.
