Report Overview

A Hold Baggage Screening System (HBSS) is a comprehensive security solution designed to detect and identify potential threats within passengers' checked luggage at airports. This system employs advanced imaging technology, such as X-ray computed tomography (CT), to create high-resolution, 3D images of the contents of each bag. The images are then analyzed by sophisticated algorithms and security personnel to identify prohibited items, explosives, and other threats. The HBSS aims to enhance airport security by providing a more accurate and efficient screening process, reducing the need for manual inspections, and ensuring the safety of both passengers and airport staff. This system is crucial in the global fight against terrorism and criminal activities, as it helps to prevent dangerous items from being transported on commercial flights.
