Home and specialty infusion is a vast arena of pharmaceutical services provided in the outpatient setting, typically in the patient's home or an infusion suite. The majority of these medications involve administration through a needle or catheter, otherwise known as infusion, while others are administered via alternate routes of administration such as intramuscular, epidural, and self-injectable means. Infusion medications are prescribed for both acute and chronic illnesses that cannot be effectively treated with oral medications alone. Patients may shorten or avoid stays in institutions such as hospitals and nursing homes when their infusion therapy can be provided in alternate-site settings including their homes and ambulatory infusion centers.
