Report Overview

The home UV phototherapy device market has grown significantly in recent years, driven by increasing demand for convenient and cost-effective treatment solutions for skin conditions such as psoriasis, eczema, and vitiligo. These devices emit controlled doses of ultraviolet (UV) light, primarily UVA or UVB wavelengths, to slow abnormal skin cell growth and reduce inflammation, offering patients an alternative to clinical treatments. Technological advancements have led to the development of portable, user-friendly devices with safety features like automatic shut-off and adjustable intensity settings, making them accessible for home use.
