### Report Overview

A Horizontal Mixed Flow Pump is a type of pumping equipment designed to handle the movement of fluids in a horizontal direction. It is characterized by its ability to operate at an angle between pure radial flow and pure axial flow, typically ranging from 15 to 60 degrees. This design allows for a more efficient and versatile pumping solution, especially in applications where space is limited or where the fluid needs to be moved over a short distance with a moderate head requirement. The pump's impeller is designed to create a mixed flow pattern, which combines the benefits of radial and axial flow pumps, such as high efficiency, reduced noise, and the ability to handle solids or viscous fluids. Horizontal Mixed Flow Pumps are commonly used in industrial processes, water treatment facilities, and HVAC systems where moderate head and flow rates are required.
