Report Overview

A Horizontal Vacuum Cloth Filter is an industrial filtration equipment designed to separate solid particles from liquid suspensions. It operates on the principle of vacuum filtration, where a vacuum is created within the filter chamber, causing the liquid to pass through a porous cloth or filter medium while retaining the solid particles. The filter is characterized by its horizontal design, which allows for a larger filtration area and more efficient use of space. The cloth filter medium is typically made of synthetic materials like polyester or polypropylene, which are resistant to wear and corrosion. These filters are widely used in various industries such as chemical processing, mining, food and beverage, and pharmaceuticals for applications like dewatering, clarification, and purification of liquids. Key features include adjustable filtration rates, ease of cake discharge, and the ability to handle a wide range of particle sizes and concentrations.
