Report Overview

A Hospital Rail-Mounted Variable-Area Flow Meter is a type of flow measurement device designed specifically for hospital settings, particularly for monitoring the flow of medical gases such as oxygen, nitrogen, or air. This device is mounted on a rail system, which allows for easy movement and positioning within a healthcare environment. The variable-area flow meter operates on the principle of a tapered tube with a float or disk inside. As the medical gas flows through the tube, the float moves up and down, and the position of the float is used to indicate the flow rate. The rail-mounted design of this flow meter provides flexibility, allowing healthcare professionals to adjust the flow rate as needed and easily move the device to different locations within the, such as patient rooms, operating theaters, or medical gas supply areas.
