Report Overview

A hot cathode ionization vacuum gauge is a vacuum measurement device that relies on heating the cathode to produce ionization. In this equipment, when the cathode is heated to a certain temperature, it emits electrons. These electrons then collide with gas molecules in the vacuum, leading to ionization and the generation of current. Hot cathode ionization vacuum gauges are applied in various industrial and research fields, such as semiconductor manufacturing, space simulation, and laboratory research, for precise measurement and monitoring of vacuum levels due to their high sensitivity, wide measurement range, and ease of operation.
