Abstracts

The thermal field emission electron microscope (Field Emission Transmission Electron Microscope, referred to as FETEM) is a high-performance electron microscope, whose core feature is the use of a thermal field emission electron gun as an electron source. Thermal field emission electron guns heat cathode materials (usually tungsten or lanthanum hexaboride, etc.) so that electrons on the surface of the material gain enough energy to escape and form electron beams. Under the action of the accelerating voltage, these electron beams pass through the lens system and focus on the sample to form high-resolution electron images. They are widely used in research fields such as semiconductors, materials science, and life sciences.

The global Hot Field Emission Electron Microscope market size was estimated at USD 285.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
