### Report Overview

Hot Rolled Pickled Plate (HRP) is a type of steel product that undergoes a specific manufacturing process to achieve desired properties and surface finish. It starts with hot rolled steel, which is produced by rolling steel slabs at high temperatures to reduce their thickness and create flat sheets or plates. After hot rolling, the steel plate is subjected to a pickling process, where it is immersed in an acidic solution to remove surface impurities, such as oxides and scale, resulting in a clean and smooth surface. This process enhances the plate's surface quality, making it suitable for applications that require better surface finish and cleanliness compared to standard hot rolled plates. Hot Rolled Pickled Plate is used in various industries, including construction, automotive, and heavy machinery, where high strength and good formability are required.
